PRIVACY FENCE STRIPS

PRIVACY FENCE STRIPS

Privacy protection - simple to install.

T&K.A-privacy fence strips are made out of polypropylene and offer optimal protection against prying eyes.

Each double bar or flat bar panel fence can easily be turned into a privacy protection fence. Same is valid for swing gates with equal infills. By using privacy fence strips it is virtually impossible to observe your premises.

Our privacy fence strips are made out of environmentally friendly polypropylene (PP). Contrary to strips made out of PVC (which contains chloride), they do not present any particular risk in the event of a fire.

PP is odorless, skin tolerant and 100% recyclable. The privacy fence strips are color-fast and light resistant (7-8 according to Wool scale).

We offer a 5 years warranty from day of manufacturing.

You can choose between 2 different surface designs and 3 standard colors:

LEATHER DESIGN

Size 2520/190/1.1 mm

Anthrazite (similar to RAL 7016)
Window gray (similar to RAL 7040)
Green (similar to RAL 6005)

CORRUGATED DESIGN

Size 2550/190/1.5 mm

Anthrazite (similar to RAL 7016)
Window gray (similar to RAL 7040)
Green (similar to RAL 6005)
Other RAL colors on request

Notes:
All post profiles and foundation dimensions T&K.A. recommends comply with general structural requirements. They are not a substitute for the site-specific structural analysis as specified by construction supervision. This is to be provided by the customer.

All goods declared by us as hot dipped galvanized are hot dipped galvanized according to DIN EN ISO 1461. This procedure protects all metal components against corrosion. The formation of white rust cannot basically be prevented. It is a powdery, water-soluble product of zinc corrosion formed from zinc hydroxide and zinc oxide. This is not a quality defect and with the formation of the zinc patina layer, this occurrence disappears completely. Minor surface irregularities and zinc discharge points are production-determined features and are evidence of hot dipped galvanizing (source: Zinkberatung e.V., [the German zinc consultative body] Düsseldorf).

Technical details are subject to change. Custom-made products, other RAL colors and dimensions on request.

By using our modern tube laser system, we can offer you exceptional solutions for any demand you may have. Please contact us!

NUMBER OF STRIPS

PANEL HEIGHT mm	NUMBER OF STRIPS
630	3
830	4
1030	5
1230	6
1430	7
1630	8
1830	9
2030	10
2230	11
2430	12

Attention: When using privacy fence strips massive wind loads have an impact on the fence structure. Site-specific structural analysis as specified by construction supervision must be executed locally at site. This is to be done by the customer. If in doubt, consult a structural engineer!
